

## Wireless Sewing Machine Adapter StitchLink II

Embroidery patterns downloaded from the Internet - what's next?

## The most comfortable way to send embroidery patterns from your PC to your sewing machine

As an embroidery enthusiast you like to take advantage of the embroidery patterns offered on the Internet.

The problem is: the PC is often in a different room than your sewing machine and in many households the PC is downstairs and the sewing machine is upstairs or the other way round.

With StitchLink II you can simply send embroidery patterns from room to room and accomplish this task without any cabling.

StitchLink II frees you from the disorder of messy and bothersome cables between the computer and your sewing machine.

To use the StitchLink II you do not have to be a computer expert. silex support will gladly provide set-up assistance over the Internet without charge.

## The most comfortable way to send embroidery patterns from your PC to your sewing machine

### Features

#### Easy to use

Using StitchLink II is like having your sewing machine directly connected over a cable with your PC - with the only difference being that there is no messy or bothersome cable between the two devices. For the following reasons it is simpler and easier to use than a USB memory stick or a memory card with a card reader:

- ❖ One-step simplicity – you do not have to copy the embroidery pattern data from your PC to a USB storage medium and then transfer it to your sewing machine.
- ❖ You do not have to walk from one room to another and then back again to transfer your embroidery patterns to the machine.
- ❖ One does not always have USB storage media handy and these devices are easily lost or otherwise misplaced.

#### Effortless

No need to carry heavy machines around the house - neither the sewing machine to the PC nor the other way round.

#### Free set-up assistance

One of the most important maxims for silex technology is the ease of use of our products. That is ensured from the start with a very simple installation. On top of that, we ship every StitchLink II with a step by step procedure as an additional support measure for the user. Should the installation fail in spite of the guidance in the instructions, there is a "virtual assistant program" available through our technical support staff. Using remote control over the Internet, a technician accesses your computer to configure the StitchLink II or to take you through the configuration step by step. If need be, simply call silex support at +49-21 59-67 50-22 or send an e-mail to support@silexeurope.com.

#### 802.11g & USB 2.0 Hi-Speed

Through the wireless standard 802.11g and USB 2.0 technology, StitchLink II supports you with high speed transfer, even for large patterns.

#### Security

Your wireless network is secure with StitchLink II because silex uses the security standard WPA (WiFi Protected Access). This high standard for network security from silex technology protects your wireless network against misuse from external intruders.

#### What do I need to use the StitchLink II?

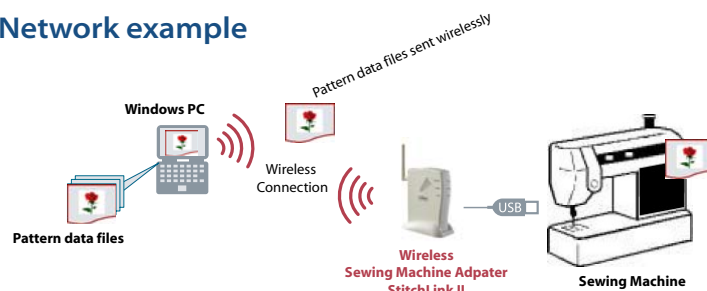

To be able to use the StitchLink II you need the following:

- ❖ StitchLink II
- ❖ Sewing machine with a USB interface
- ❖ PC with Windows XP or Windows 2000

If you want to use the StitchLink II in wireless mode, your PC should be enabled for WLAN applications to make use of the 802.11b or 802.11g standard for communications. If your PC is not WLAN-ready you can accomplish this easily either by adding a wireless LAN adapter (USB WLAN stick) or through an Access Point. Your local computer specialist can get this done for you in no time.

You can also connect the StitchLink II over a standard cabled network (LAN).
